

SYSMAC 1.24 UPDATE

GELİŞTİRİLEN ÖZELLİKLER:

- 1. Search and replace'de getirilen yenilikler
- 2. Ladder içindeki st ekranının büyütülmesi
- 3. Data trace ekranında, variable-graph gösterimindeki ayarlamalar sayesinde, ilişkilerin daha iyi kurulması
- 4. Shortcut tuşlarının custom olarak ayarlanabilmesi
- 5. Ayrı projede oluşturulan NA ekranının, Sysmac projesinin içine kopyalanabilmesi
- 6. Manuel indirme sayfasına Sysmac Studio üzerinden yönlendirme

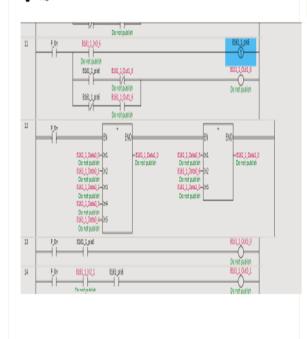

Searched items are highlighted, which helps you to view the locations of the searched items.

From:

If there are a lot of variables in the window, it is hard to find one. You need to search the variable one by one.

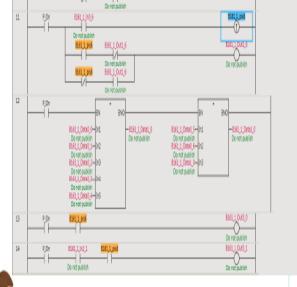

To:

If you search a variable, the variable is all highlighted in the view. You can find the variable at once.

While a text string to search is entered, all searched items are highlighted even after you move to another window.

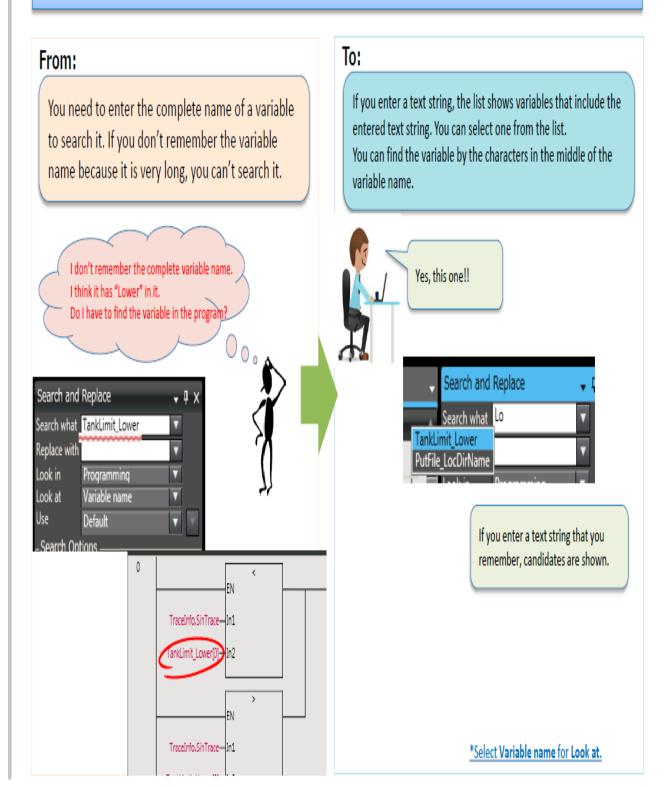

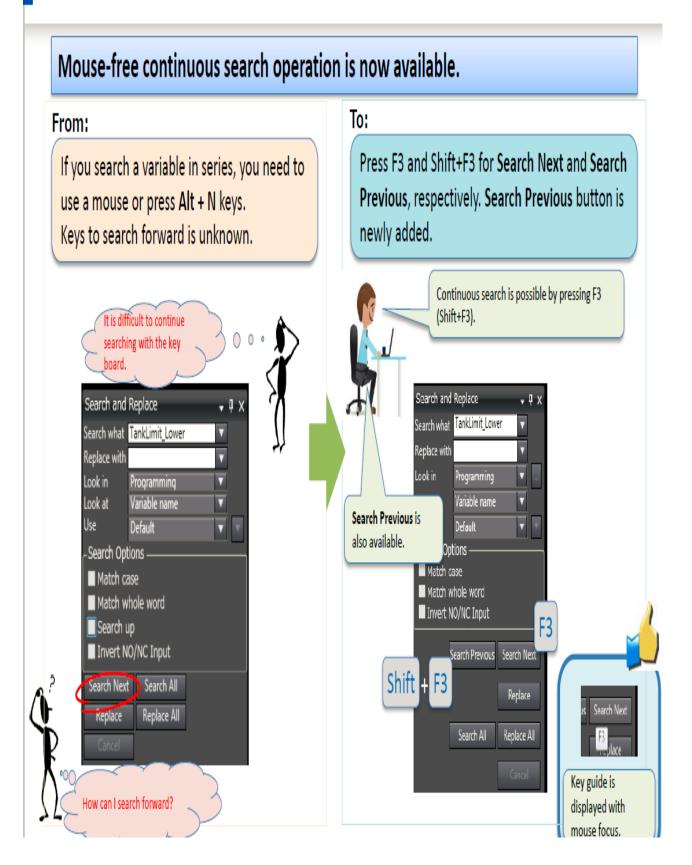

List of most likely variables found from the entered text string is shown for Search function.

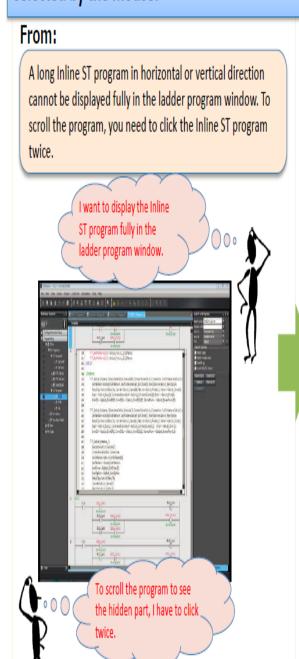

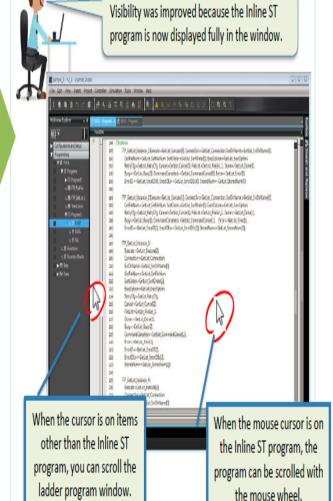

Restriction on display size of Inline ST program was cleared. The program can be scrolled if it is selected by the mouse.

To:

Restriction on display size of Inline ST program was cleared and it is now displayed fully in the ladder window. If the mouse cursor is placed on the Inline ST program, you can scroll the program with the mouse wheel.

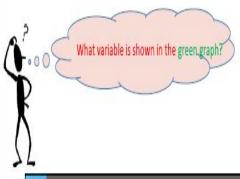

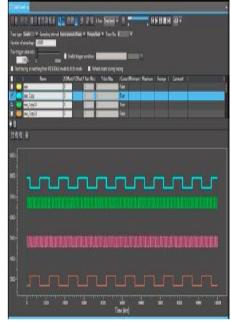

Data analysis becomes easier with data trace results.

From:

To confirm the relationship between graphs and variables, the user needs to check the colors in the variable table above the graphs. Some variables are not listed in the table. It is difficult to analyze the trace data.

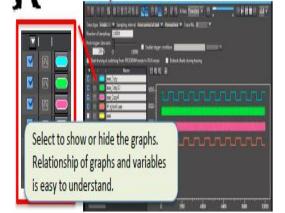

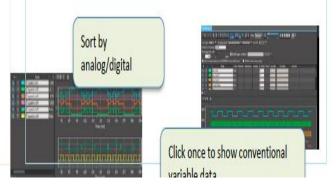

To:

Variable table can be moved to the side of the graphs by just clicking the button.

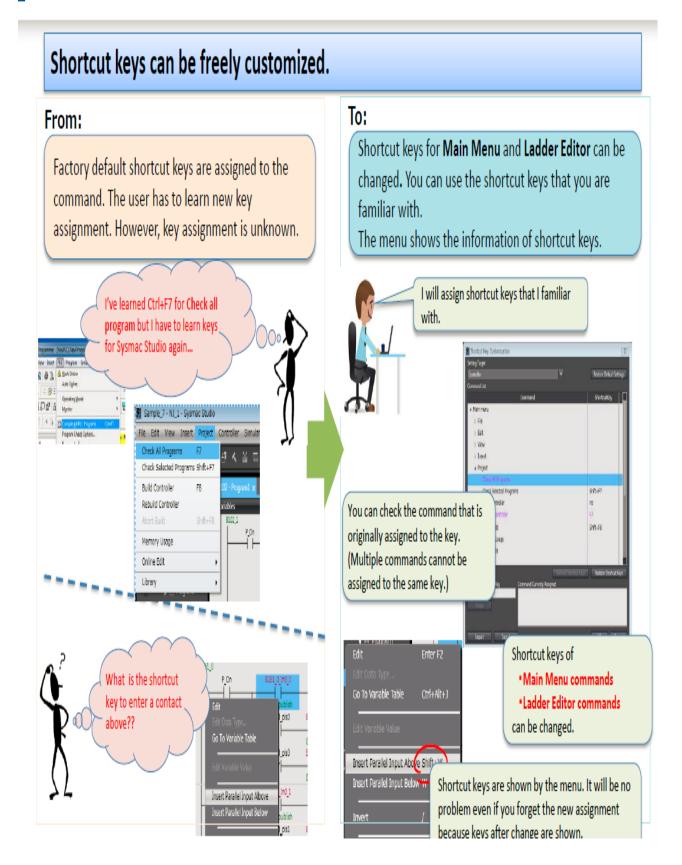

You can show/hide the graphs by selecting checkboxes and sort the variables by digital/analog. Relationship of graphs and variables are visible.

By just clicking the button, variable table is displayed by the graphs. It is convenient to analyze the data.

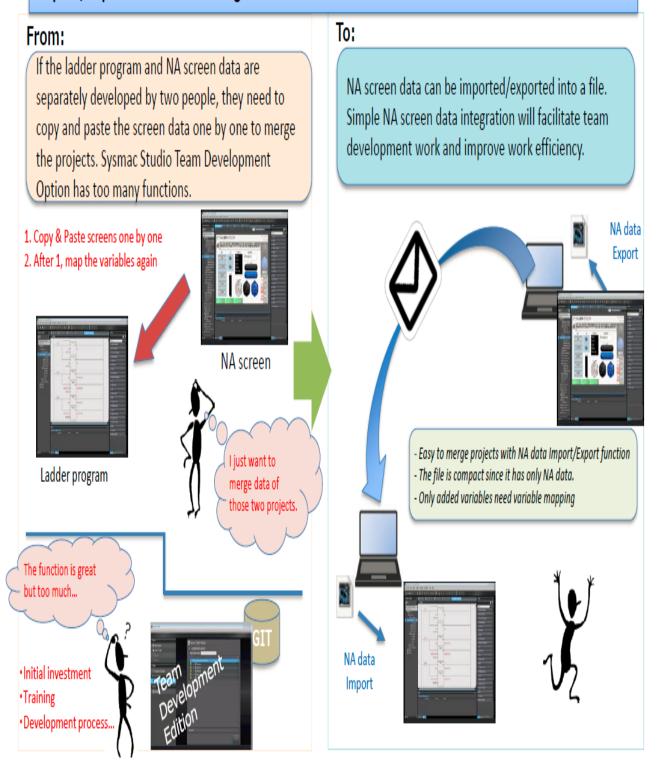

A ladder program and an NA project can be developed concurrently. Use NA data import/export function to merge them.

You can move to the manual download web page from the Sysmac Studio.
